

MULTI-TENANT ACCESS – BUILD YOUR ACCEPTANCE NETWORK

Access can be defined at any level in the retail estate hierarchy. The operator can view global information and has total visibility and control over the agent network. Individual ParcelShop agents can only access parcel transaction information related to their own stores and rapidly set up or suspend accounts if required. Build and manage your acceptance network from top-level, right down to the terminal or device end-points.

CROSS PLATFORM MOBILE DEVICE SUPPORT

The Escher platform offers cross platform device support from day one. Get more return from existing hardware assets with full support for WinCE. Move to other operating systems such as Windows Mobile, iOS or Android. Even deploy your ParcelShop application as a consumer APP through the various APP stores. Let the agent location use their own hardware device. All of these devices and locations are centrally managed.
